Context: Don't use the prototype in the GitHub as it's an older version of the prototype. The files for that are uploaded in here(which are very big because I couldn't get the thing to export/ compress properly without losing a lot of things, sorry). If the video in here doesn't work, try watching the version submitted in the tutorials link (it's under the name prototype video). And if that doesn't work request access to the videos or email me (also if does have these issues I'm very sorry for the inconvenience).
